

Centering Clamping Elements · with clamping segments

23340.0014

Product Description

For clamping and centering of workpieces with internal bore. Exact self centering with a precision of $\pm 0,025$ mm. Due to the clamping segments being ground, workpieces with raw and/or machined surfaces can be frictionally connected, centered and held down at the seats. Large adjustment stroke and a low building height are a feature of the centering clamping element. **Mounting from either top or bottom.**

Material

Body

- Tool steel, hardened, blackened

Spring

- Stainless steel

Clamping segments

- Stainless steel 1.4112, hardened and ground

Assembly

Assembly instruction for mounting from above: Remove clamping plate and screw. Screw in threaded pin from below, and tighten from above using female WS₂.

Further or detailed information can be found in the assembly and operating instructions.
